

Terra Energy Services Electric Vehicle Charging Stations for

# MUNICIPALITIES

Energy Options  
Power Generation, Storage,  
and EV Charging

## A NATURAL CHOICE FOR MUNICIPALITIES

EV charging stations help local municipalities to support job growth and a cleaner environment.

With the growing prominence of electric vehicles (EV) on the road, there is an increasing need to support residents and local businesses by providing a new, sustainable public service. Take the opportunity to shine a light on your city's forward-thinking initiatives by installing Electric Vehicle Charging Stations and attract more visitors in the process.

Benefits of installing Terra Energy Services Stations include:

- The Station has been designed to be visually compelling to effectively enhance the image of its host property location.
- Installation is simple, quick, and affordable. The electrical service connection only requires 3 wire nuts, 4 screws and you're done!
- Be a leader in this highly visible sustainable industry.
- Provide a valuable amenity for your EV driving employees.
- Every time a visitor enters or leaves your community, they will be reminded of your commitment to sustainability.
- The Station system includes environmental reports for carbon offset and oil reduction.
- Open network allows EV drivers to easily pull up and start charging their vehicles without having to join a network membership program first.
- Administration is able to easily manage pricing, access, view live station status, and generate usage and sustainability reports.
